

Planetary Research

A diamond open access journal for planetary science

Planetary Research is a community-led journal that is being developed by the international planetary science community. The journal will use the diamond open-access publishing model, which means that there will be no article processing fees for authors and no subscription fees for readers. The journal, run as part of a non-profit organization, will operate with a transparent governance and will promote the work it publishes to the scientific community and the general public alike. Manuscript submissions are expected to open in January 2026.

We seek candidates for the journal's editorial board, including the *Editor-in-chief*, *Editors*, and *Associate editors*. We are also seeking candidates for the journal's *Media and Technical teams*. Interested candidates should provide a CV, a publication list, and a short letter motivating their interest in the position to the chair of the search committee (mark.wieczorek@cnr.fr) before July 1, 2025. No prior experience is required. Additional information about the journal can be found on our website:

<https://planetary-research.org>

Open call for
an Editor-in-chief,
Editors, and
Associate editors.

We are seeking a single *Editor-in-chief* who will be responsible for enforcing all editorial policies of the journal, standardizing peer-review practices among the editors, appointing associate editors when needed, and approving special issues. The editor-in-chief is by right a member of the non-profit association's steering committee. The editor-in-chief, if desired, may oversee the peer review of manuscripts submitted to the journal.

We are seeking approximately five *Editors* who will oversee the peer review of manuscripts that are submitted to the journal. Editors are responsible for the decision to publish a manuscript or not, and the workload is expected to be about two new manuscripts per month (which can be adjusted to suit the time constraints of each editor). Editors can make use of associate editors for various aspects of the peer review process.

We are seeking approximately 10 *Associate editors* in a broad range of disciplines to aid the editors in various aspects of the peer review process. Associate editor tasks may include contacting reviewers, assessing the reviews, and providing independent assessments of manuscripts. The expected workload of an associate editor is less than one new manuscript per month.

We are seeking *Media team members* whose activities would include running a separate website as the journal's blog and social media accounts. The journal's blog is expected to publish short, plain-language author-provided summaries of research articles, an image of the week, space art of the week, and other content that would be of interest to the community.

Open call for an Editor-in-chief, Editors, and Associate editors.
